Singapore Maker Initiative, Tech Meetups, Start-ups

Support from government sector and investment fund

https://webuild.sg
Ubuntu Myanmar Loco Team, active since 2009

Barcamp Yangon - biggest barcamp in the world with more than 3,000 attendees
Cambodia, Open Institute
Indonesia, Humanitarian OpenStreetMap Team
**FOSSASIA’s Mission:** we want to see that information technology and science have a liberating impact on our society. We believe this can be achieved if people have access to digital tools and knowledge. Open Technologies offer free and open access. At FOSSASIA we are excited how sharing is possible on all layers from software, hardware and design to data and knowledge and we work hard to enable people to participate in the sharing society, expand knowledge, tools and opportunities, freedom of communication and expression for everyone.
FOSSASIA.ORG

We are a network of people from all continents, who want to see progress and improvements of people’s lives in Asia and everywhere. We are developers, designers, event organizers and contributors who want to learn and share ideas, create and make digital software tools and hardware, that benefits people around the world. We develop software applications for social change using a wide-range of technologies. Projects range from Free and Open Source software, to design, graphics and hardware.
